

*Management is individualized based on assessment of risk and benefit
 † Urine testing preferred. Saliva PCR should be confirmed with urine CMV testing when infant is breastfed
 ‡ **A negative DBS cannot rule out cCMV**
 § Probable cCMV: Presence of highly specific findings PLUS urine CMV-positive >21 days
 CMV Cytomegalovirus; cCMV Congenital cytomegalovirus; ID Infectious diseases; DBS Dried blood spot; NBHS Newborn hearing screen; SNHL Sensorineural hearing loss
